My Shiny App

p creates a paragraph of text.

A new p() command starts a new paragraph. Supply a style attribute to change the format of the paragraph.

strong() makes bold text. *em()* creates italicized (i.e, emphasized) text.

`code displays your text similar to computer code`

div creates segments of text with a similar style. This division of text is all blue background.

span does the same thing as div, but it works with groups of words that appear inside a paragraph.
